

TMD Hosting

1. Nameservers

DNS is managed from cPanel. Nameservers are usually set to ns1.serverhostname.com and ns2.serverhostname.com. Example:

Server: c16.tmdcloud.asia

Nameservers: ns1.c16.tmdcloud.asia

ns2.c16.tmdcloud.asia

We can double check the correct nameservers from WHM -> Nameserver Record Report

It is the same for the Plesk Servers. Example:

Server: win11.tmd.cloud

Nameservers: ns1.win11.tmd.cloud

ns2. Win11.tmd.cloud

New servers are provisioned on our infrastructure so customers should use our nameservers.

All servers are accessible with ldap and Staff Login button.

If a customer is using external DNS, and they need MX records we can provide them with the following:

mx1.tmdhosting.com

mx2.tmdhosting.com

They are valid for all servers, and they are connected with SpamExperts as well. If you have cases with email issues, do not forget to check if the correct configuration is set up in SpamExperts (point 2).

2. SpamExperts

Professional Spam Filter is integrated in cPanel and customers have access to their own SpamExpert account and they can manage their incoming and outgoing filters. You can access that from cPanel.

3. Weebly

TMD Hosting has integration with Weebly but after moving to Upmind the feature is not working and customers cannot access their Weebly platform to make changes to their websites. If you have such cases, please make sure to inform the customer we are working on a fix, and we will update them as soon as possible once it is fixed. Tickets should stay with status “In Progress”. If the customer insists on the change, we can check with Stoyan Momchilov who has access to Weebly, and if it is something small, he may help with changes but please double check with him before any promises.

4. Known issues after the integration to Upmind

- Weebly access
- Addon products are missing from Upmind and we cannot place orders for them - **FIXED**
- There are no separate invoices for the already purchased addons and we cannot see them as a separate service.
- Root access is lost. They had some semi-managed servers until last week, however, all passwords are updated, and we should not provide root access to them if they ask. If you have a customer who insists on root access, please check with TL/SV how to proceed with them.
- Tickets from the beginning of the year have been imported, if someone is looking for older tickets, we still don't have information if this will be possible – let them know that we will check and ask a TL/SV.
- Subaccounts – A lot of our customers had subaccounts with different access levels and emails, and now those subaccounts have no access to the client area.
- SpamExpert – 1 IP is blacklisted on Spamhouse (not related to Upmind but it is an ongoing issue).

5. Support

- TMD offers Linux and Windows hosting services. All servers are now managed.
- They use offside backups for restoration. They do not use Jetbackup 5 as a plugin in WHM/cPanel. They use Borger – there is no UI, everything should be done via SSH. If

you need to do a restore, check with TL/SV who has access to the TMD wiki page and can give you the steps how to restore it. We keep backups for the last 30 days.

- Make sure you have addressed all their queries, and you have provided a proper solution to their issue. If you are not sure how to resolve their issue or they have a request that we would usually say no it is better to check with someone in the Teams channel. **DO NOT** refuse right away.
- TMD Hosting has VIP customers – divided into 3 groups (Bronze, Silver, Gold). Make sure if you see a request from VIP customer to reply with priority.
- Trust & Safety manages the abuse reports, you can escalate such cases to their queue.
- Billing queries should be escalated to the Billing queue (there's a separate Billing team in TMD).
- Cancellations – we should escalate such cases to Cancellations queue (those cases are handled by the TMD Sales team, not handled by our cancellation and advocacy team)
- Sales tickets should be escalated to the Sales queue (TMD Sales team handles them)
