Upmind

Upmind is a billing platform that ticks all the boxes. Aimed at any SME that believes in recurring customers. Upmind includes everything you need to successfully run and scale your online business.

Key functionality includes:

- A complete suite of business tools
- Data consistency and integration between those tools.
- Instant setup, and near zero management overhead.
- First-party integrations with a growing number of external services, gateways, and products.
- The ability to sell, manage and provision any product or service that has an API
- Low pricing and no setup costs or technical experience needed

Webcentral uses Upmind to liaise and communicate with our customers as well as linking to chatwoot, our livechat system.

What is documented here is mainly an cheat sheet for this Brand. This manuel is used as a basic guide for staff who will use Upmind as both a CRM and and Support tool. Although Upmind manages many many brands, we will be focusing on Webcentral.

DNS/Zone records

These are some of the default DNS/MX/Zone records used by Webcentral and their brands

Default Name servers

Cloud	cPanel	WHG cPanel
ns1.netregistry.net ns1.netregistry.net ns3.netregistry.net	ns1.server-cpanel.com ns2.server-cpanel.com	ns1.mysecurecloudhost.com ns2.mysecurecloudhost.com ns3.mysecurecloudhost.com ns4.mysecurecloudhost.com

Domainz	Domain IP	Newdomain
ns1.nserver.net.nz ns2.nserver.net.nz ns3.nserver.net.nz	ns1.dnmmmt.com ns2.dnmmmt.com	ns1.newdomain.com.au ns2.newdomain.com.au

Default MX Records

Cloud	cPanel	OX-Mail	O365	Smartermail
SPAM Experts ON mx.netregistry.net mx4.netregistry.net SPAM Experts OFF mx2.netregistry.net mx3.netregistry.net	mail.domain.com Routing : local	mx.wcg-mail.com	domain-com.mail.protection.outlook.com	mx3594.syd1.mymailhosting.com

IP ADDRESSES

Server name	IP Address
Apache Litespeed	202.124.241.203
Zeus Webserver	202.124.241.200
Redirector	202.124.241.178

Product list

Current products can be located on the appropriate websites;

Webcentral; <https://webcentral.au/>

Melbourne IT: <https://melbourneit.au/>

Domainz: <https://domainz.net.nz/>

New Domain: <https://newdomain.com.au/>

Domain IP: only sells domain names

Popular legacy services: Cloud Hosting packages, Websites Done for You, Windows2012/BNE hosting

Note: any of the above will likely need to be escalated to our tech supervisors/infra depending on the issue however cases can be moved into “**Escalated**” if it is a technical based issue

DNS/parked domain/domain manager

Our previous “**Parked Domain**” product simply provided a zone editor function with 10 free zone edits per year to our clients.

If this is missing from the clients account and the nameservers are pointing to us you can add the “domain manager” product and update the appropriate records based on the historical zone records.

Our previous “domain manager” service provided unlimited zone edits as well as redirection and an easy email alias function. This is now called “advanced domain toolkit”.

Advanced domain toolkit is only applicable for the previous clients that were paying as this is no longer a service being provided moving forward.

Please ensure you update the WCG runsheet so that we are aware of missing services from clients accounts.

SmarterMail

Smarter Mail is a new email hosting service soon to be offered on all brands but beginning with Domainz .

Full product deck is available;

<https://whguk.sharepoint.com/:w:/s/product/EZc7VERokntLulzzrSgZrskBHFYq1h8fw43tC7mgMgP5eA?wdOrigin=TEAMS-MAGLEV.p2p ns.rwc&wdExp=TEAMS-TREATMENT&wdhostclicktime=1729660773850&web=1>

Whilst the product is automated, if the client has external nameservers, the DNS settings required will still be visible from the clients account under the product. Guide the client to view this on their end so they can copy/paste to avoid any misunderstanding/mistakes typing it out on their end.

Any issues with the product please reach out to the ask-product team on teams

Professional E-Mail

Small (tg-test-dkim.com)

Overview Billing Settings

The next renewal invoice for this service will be due Nov 17th, 2024.

Service details

Here are the configuration and setup details for your service:

Mail Server Name mx3594.syd1.mymailhosting.com

DKIM Key [MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQC0OyjJs9HIL0/Xh6zkM0ipToz5prB5Lpl64ZEZKmiuLBFsX+6I](#)

How to generate an RNC

For .au domain name we require specific eligibility criteria to be met in order to renew a domain name. If you see a domain that has failed to renew even though payment has been made, it is likely that the domain failed due to ineligibility. View the domain registration requirement

In these cases, a registrant name change(RNC) will need to be actioned.

At the moment the RNC product in Upmind is called "Change of Registrant". At the moment, customers are currently unable to initiate an RNC from their Client Portal. We can, however, initiate one from Admin Portal .

If you take a call or contact from a customer requiring an RNC please:

1. Place the order in Upmind
ENSURING THAT YOU INCLUDE THE DOMAIN NAME THE RNC WILL APPLY TO IN THE ORDER.
2. Create a ticket for the customer confirming their RNC is being processed and escalate this to the "Domains" department in Upmind. **NOTE: include normal process case notes including domain, authentication status, the entity (ABN, ACN etc) they wish to change registrant to etc.**
3. Domains team (aka Admin & Billing) will then take the ticket and process the RNC, confirming with customer once it is complete.

Be aware that because the RNC workflow itself will still be handled via console (as all .au domain related workflows are for all brands), that workflow MAY send the customer emails prompting them to login to Console to process the RNC - you can advise customers to ignore these as the process will be handled internally entirely manually.

Domain registration requirements

com.au, net.au, .au direct

<https://www.auda.org.au/au-domain-names/domain-name-help/comau-and-netau-rules-eligibility-and-allocation>

To be eligible for a **com.au** or **net.au** name the registrant must have an Australian presence and be a commercial entity.

The following kinds of commercial entity are eligible for com.au or net.au domain names:

- a company under the Corporations Act 2001(Cth);
- a Commonwealth entity as defined in section 10 of the Public Governance, Performance and Accountability Act 2013(Cth);
- a Registrable Body under the Corporations Act 2001(Cth);
- an Incorporated Association under State or Territory legislation;
- an entity or natural Person issued with an Australian Business Number under the A New Tax System (Australian Business Number) Act 1999 (Cth);
- a Statutory Body under Commonwealth, State or Territory legislation that engages in trade or commerce;

- a Trust issued with an Australian Business Number, but does not include a charitable trust or a public or private ancillary fund;
- an Incorporated limited partnership under State and Territory legislation;
- a Trading Cooperative under State and Territory legislation;
- Government, being either the Crown or a Commonwealth, State or Territory statutory agency; or
- a foreign legal entity or natural person who holds or has applied for an Australian Trade Mark.

For a .au direct domain name;

To be eligible for a .au direct name you must have a verifiable Australian presence, which includes being a citizen or permanent resident or an organisation registered in Australia. The full definition of an Australian presence is in the definitions section of the .au Licensing Rules.

NOTE: any uncertainties surrounding this will need to be addressed by the Admin and billing/domains team.

M365 basics

(how to set up an email, reset password)

Microsoft 365 setup and provisioning will require CSP or admin access from client. Understand that most things a client can do, they can do with their Office 365 Admin access. There will be times where staff will need to access the client's Office 365 Admin portal to do certain things. The client will need to create an admin user or have an admin user with **Global Admin Permissions**.

Default Office 365 Zones

Office 365 has default Zones that will need to be added for the service to work.

<https://support.webcentral.au/docs/microsoft-365-zone-records>

<https://support.microsoft.com/en-au/office/connect-your-domain-to-office-365-cd74b4fa-6d34-4669-9937-ed178ac84515>

<https://learn.microsoft.com/en-us/microsoft-365/admin/setup/add-domain?view=o365-worldwide>

Record Type	Host Name	TXT Value	TTL
TXT	@	MS=msXXXXXXXXXX	3600
TXT	@	v=spf1 include: spf.protection.outlook.com -all	3600

Record Type	Host Name	Points to	TTL	Priority

SRV	@	sipfed.online.lync.com	3600	100	_sipfederationtls	_tcp	5061	1

Microsoft has a dedicated support page to assist you - [Add DNS records to connect your domain](#).

Main issues

These are the 3 common issue that you may get in relation to Office 365 domain Validation. Remember , it is a limitation of Microsoft 365 that you cannot have the same domain name with 2 CSP resellers.

Issue	Solution
DNS with us , Default records not found	Login to the CSP portal and attempt to run the setup again. It may give you different MX records for the domain validation.
DNS not with us, Default records not found	Have the client add the default MX records that is shown in the Zone Manager and attempt to validate the domain again.
They currently have their domain with another Office 365 Reseller	Unfortunately the client will need to cancel their Office 365 with the other provide before we can continue with the domain validation.

Password Reset in M365 portal

A common call driver is a customer requesting a password reset for their M365 email account. This can easily be done through Microsoft 365 admin center; you can guide the customer or do it for them by following the below.

CSP > Search domain > Service Management > Microsoft 365 > Users > Active users > Select the user > Reset password

Creating and email user in CSP

Log into CSP -> search the domain in the customer list and once you are on the customer profile -> click on users and licenses from the tabs on the left -> select add user -> fill out the pop up form and ensure the email you are creating is correct as well as assign a license. Assign a permission set to the user (this will usually be “user” unless the client requires you to set up an admin user) -> review and save

Checking Health for a domain name in CSP

You can check the status of the domain and make sure it is properly connected to Microsoft via CSP.

In the Microsoft 365 admin center, navigate to “**Settings**”, click “**Domains**” and select the customer’s custom domain name. (The onmicrosoft.com domain is added automatically)

When you sign up for Microsoft 365, Microsoft provides an onmicrosoft.com domain - your fallback domain - in case you don't own a domain, or don't want to connect it to Microsoft 365 (for example, tailspintoys.onmicrosoft.com). Your fallback domain is used by default in: Usernames and email addresses.

Website builder(Yola)

The Yola Sitebuilder needs to be manually setup the first time through Upmind. You will need to input the account reference and server and save it. Then the login button will work.

In order to save the credentials you have to click "**Get Info**", then put the Domain name, the username of the cPanel account and the site builder ID would be the same as the cPanel account.

Note the site builder ID is mandatory, even though it has no asterisk. Once you do that, you can then click "**manage website**" and it will automatically log you in for the client to then be able to access, edit and publish using the Sitebuilder platform.

Legacy products(Console)

In almost all circumstances you will need to refer any support related enquiries about these Legacy Products to our Australian Tech-SME's. There is no Automation built for these products in Upmind and exclusively run through the console. We no longer offer any of these products, but may continue to be charged or servers still active.

Sitegalore

A very very old Sitebuilder service . Support for this is almost non-existent, any upgraded from a Sitegalore Sitebuilder service to any WHG plan will wipe their website. There are no backups to Sitegalore.

Sitelock

This is a selfmanaged Website Security product. It is through a third party and access to its management portal is through the console.

Sitelock Dashboard

From the Sitelock dashboard you can connect your site through ftp and start scanning.

The screenshot displays the Sitelock Team Account Dashboard. On the left is a sidebar with navigation links: Dashboard (selected), Sites, Settings, Messages, Help, and Logout. The main content area is titled 'Team Account Dashboard' and features a 'Domain Statistics' section for 'example-domain.net'. This section includes a dropdown menu for the domain and a 'LOW' risk indicator. Below this are seven scan status cards arranged in two rows. Each card shows a scan type, its status (Active or Verified), and a 'View Details' button. The scans include SSL Scan, TrueShield, Domain Verification, Malware Scan, SMART, Spam Scan, and Vulnerability Scan. The Vulnerability Scan card is expanded, showing sub-sections for Platform Scan, SQL Injection, and XSS Scan, each with their own last scan dates and counts of issues found.

Scan Type	Status	Last Scan	Issues Found
SSL Scan	Configure	-	-
TrueShield	Active	-	-
Domain Verification	Verified	12 / 12 / 2022	-
Malware Scan	Verified	12 / 13 / 2022	0
SMART	Verified	12 / 13 / 2022	0
Spam Scan	Verified	12 / 13 / 2022	0
Vulnerability Scan	Verified	12 / 13 / 2022	0

Windows 2012 BNE

In almost all scenarios, should you need assistance with a legacy Windows BNE server an escalation to our Australian **Tech-sme** will be required. Most staff will not have access to server-login details for access to the Windows server. Try and provide as much information as possible in your case/ticket so that we can assist the client.

Common Windows BNE DNS and IP addresses you will need to be aware of.

BNE IP : 203.210.102.91

BNE DNS : Management of these DNS server are all done manually through our Infrastructure team.

bn001n.server-dns.com

sjc001n.server-dns-us.com

wic001n.server-dns.com.au

Common BNE Support Scenarios

All of which will require the assistance of a Tech-SME and or Infrastructure team member.

- Server/coding issues
- SSL Installation
- Upgrade to another Webserver platform

BNE POP

This email service is on a Legacy system, there is limited to no support for BNE emails. BNE emails at the time only supported POP, No IMAP and no SMTP. You may also come across BNE emails when you do an MX record check and find the below MX records.

BNE MX

10:mx1.bne.server-mail.com

50:mx2.bne.server-mail.com

Common BNE Support issues

Here are some of the common BNE Email scenarios/support request that come up.

- BNE Email device Setup
- BNE Email Forwarders
- BNE Email Password reset
- BNE Smtplib connection
- TXT record updated for Gmail SPF rules.

Mailroom

Mailroom is our Legacy Email marketing program that Netregistry used to offer. We no longer offer Mailroom or any email marketing program for mass emails. We only have a few domains with the Mailroom service and although we longer offer it, we still support it in a very limited capacity.

Most scenarios for Mailroom support will need Tech-SME .

Mailroom Demo

<http://demo.emailcontrol.com.au/admin/>

Cloud Hosting

Although we still have many clients on our Cloud Hosting environment, it is no longer offered and support for it is limited. We still support our Cloud Hosting environment, however there have been no updates to the infrastructure since 2009. If the client requires an update to their PHP version or Database version they would need to consider moving to a cPanel plan and migrating all the data themselves.

Webarchive for a list of our Legacy Plans(2016)

<http://web.archive.org/web/20160308013640/http://www.netregistry.com.au/web-hosting/cloud-hosting/compare/>

Common Cloud hosting issues a client may need support on.

- Updating PHP Version
- Uploading site files
- Uploading Database
- Apache/Zeus Coding issues, eg Zeus/Apache Rewrites
- Website/Database restores
- Re-publishing Sitebuilder(YOLA and Sitegalore)
- Migration from cloud to cPanel

Console Legacy Email Creation

Legacy Email services such as **Cloud/OX-Mail/BNE** have no automation in Upmind. This means that any legacy email service that exist in the console but not in Upmind will need to be manually created in the console which only those that are in Philippines, Bali or Australia have access to currently. **OX-Mail** Email account may need to be create manually through the server and not through the console.

Search for the domain name in the Console.

Click **“Edit WEBMAIL”**

@	MX	50:mx2.bne.server-mail.com

SSL(Digicert)

SSL Certificates in the console used Digicert as the provider. Upmind will now be using Sectigo as part of the manuel provisioning process. When the client needs to renew their SSL, it would better for them to re-order it through Upmind. For any clients on the Cloud hosting environment with an existing or SSL renewal, you can find the CSR in the console. For any clients with a cPanel, they may need to generate a CSR in cPanel for the SSL order.

CSR in Cloud

For Current or SSL Renewals you can find the CSR and Private key Pair in the workflow or domain level console.

CSR in cPanel

Generate a New CSR in cPanel to use as part of the order.

<https://www.digicert.com/kb/csr-creation-apache-cpanel.htm>

CSR in BNE

 Generate the CSR on the BNE server(If possible) . If you cant generate a CSR from a [generic url](#) or using openssl via command line. This will also generate the Private Key Pair aswell to use for the SSL Installation.

Refunds/compensation

If a phone or chat representative receives a refund request from a client that they **believe** shouldn't be refunded (by performing basic checks such as cancellation workflow's and when the service renewed), they should provide this information to the customer on the call or chat as to why we are unable to refund including citing our cancellation/ETF policy.

The Admin & Billing Team will be handling all Refund Request cases from here on in, and the Admin & Billing team are now the only team authorized to **APPROVE** and **PROCESS** refunds. Customer Care reps on phone/chat/cases no longer have a DOA to approve refunds.

However, every Customer Care representative can and should **DECLINE** refunds of any amount if the customer is not eligible for a refund.

THE PROCESS:

If you receive a call, chat, or case where a customer is requesting a refund and they are authenticated, you will need to first check if they are eligible for a refund per our Terms & Conditions.

If they **ARE NOT** eligible per T&Cs --> decline, and do not raise a refund request.

If they **ARE** eligible per T&Cs --> create an Upmind ticket, raise a refund request using the RR template as an Internal Note:

Feel free to use the refund request template below. This will need to be filled in with as much relevant information as possible and added as an internal note before escalating to the "**Refund Request**" queue.

Refund Request Template
Case ID: Upmind Ticket ID Account reference: Domain : Product: Billed product on the invoice Invoice/s OR Braintree txn ID: Service/Product: Amount total: Refundable amount: Cancellation Workflow : Cancellation Workflow Date : Refund reason: eg, Cancelled before service renewal date, but renewal workflow was not cancelled.

Once the above is posted you will need to:

- ensure the ticket is assigned to the "**Refund Requests**" department.

AND

- Ensure that you **unassign yourself** from the ticket.

At this point, the ticket will be taken over by one of the **Admin & Billing** team members to review, process, and advise the customer of the outcome.

Therefore, the only reasons a Refund Request should be raised is:

- If there is clear fault on our end that resulted in an unwanted charge within T&Cs.
- If there is a compelling reason for us to consider a "good will" refund.

A "**compelling reason**" could include customer loyalty - that the request is coming from a high revenue account holder (min \$10,000 rev for WC, min \$15,000 for MIT, and a considerable number of current services that indicate a high spend in the future).

REFUND REQUESTS SHOULD NEVER BE GUARANTEED. Advise the customer that the Refund Request will be reviewed by the Billing team who will then advise them of the outcome.
